# AI Disclosure in Research: Options for a Machine■Actionable Standard

Consultation Draft (AIDE v0.1)

## Purpose

This consultation seeks feedback on scope, minimal fields, privacy, and governance for AIDE, a machine■actionable disclosure of AI use in research.

## Options

A) Status quo (free■text) B) Minimal metadata (AIDE v0.1, recommended) C) Full provenance logging (high cost/complexity). We propose B as the right balance for 2025 pilots.

## Questions

1) Which fields are essential across disciplines? 2) Where should disclosures live—DOI landing page, ORCID, or both? 3) What vocabularies should we standardise (usage.category, stage, role)? 4) How should we manage sensitive prompts while enabling audit? 5) Which partners will pilot in 2025–26?
